# GIT CHEAT SHEET (part I)

This is covered in part I of the git introduction:

# CONFIGURE TOOLING

Configure user information for all local repositories

\$ git config -- global user. name "[name]"

Sets the name you want at ached to your commit transactions

\$ git config -- global user.email "[email address]"

Sets the email you want at ached to your commit transactions

\$ git config -- global color. ui auto

Enables helpful colorization of command line output

### CREATE REPOSITORIES

Start a new repository or obtain one from an existing URL

\$ git init [project-name]

Creates a new local repository with the specified name

\$ git clone [url]

Downloads a project and its entire version history

#### MAKE CHANGES

Review edits and craf a commit transaction

\$ git status

Lists all new or modified files to be commit ed

\$ git diff

Shows file di erences not yet staged

\$ git add [file]

Snapshots the file in preparation for versioning

\$ git diff -- staged

Shows file di erences between staging and the last file version

\$ git reset [file]

Unstages the file, but preserve its contents

\$ git commit -m"[descriptive message]"

Records file snapshots permanently in version history

## GROUP CHANGES

Name a series of commits and combine completed e orts

\$ git branch

Lists all local branches in the current repository

\$ git branch [branch-name]

Creates a new branch

\$ git checkout [branch-name]

Switches to the specified branch and updates the working directory

\$ git merge [branch]

Combines the specified branch's history into the current branch

\$ git branch - d [branch-name]

Deletes the specified branch

#### REFACTOR FILENAMES

Relocate and remove versioned files

\$ git rm[file]

Deletes the file from the working directory and stages the deletion

\$ git rm -- cached [file]

Removes the file from version control but preserves the file locally

\$ git mv [file-original] [file-renamed]

Changes the file name and prepares it for commit

#### REVIEW HISTORY

Browse and inspect the evolution of project files

\$ git log

Lists version history for the current branch

\$ git log --follow [file]

Lists version history for a file, including renames

\$ git diff [first-branch]...[second-branch]

Shows content di erences between two branches

\$ git show [commit]

Outputs metadata and content changes of the specified commit

#### SUPPRESS TRACKING

Exclude temporary files and paths

\*.log

bui I d/

t emp-\*

A text file named.gitignore suppresses accidental versioning of files and paths matching the specified pat erns

\$ git Is-files -- other -- i gnored -- exclude-standard

Lists all ignored files in this project

# REDO COMMITS

Erase mistakes and craf replacement history

\$ git reset [commit]

Undoes all commits af er [commit], preserving changes locally

\$ git reset --hard [commit]

Discards all history and changes back to the specified commit
